01 Executive Summary

This report covers the period 26 Oct 2026 to 1 Nov 2026 (UTC). THE SIGNAL's automated collection captured 263 threat-feed articles across 8 monitored sources, 1,016 new CVE records from NVD, 10 deep-dive research write-ups, 261 ransomware victim postings, and 1 newly disclosed breach.

1,016 new CVE records were published this week, including 213 rated Critical and 803 rated High severity (100% of the week's total). 1 is listed in CISA's Known Exploited Vulnerabilities (KEV) catalog, confirming active exploitation in the wild — these warrant immediate patching priority regardless of CVSS score. 3 have already been covered in security media this week — public attention that tends to draw attacker interest too, independent of the technical severity/exploitability scoring above. Google Chrome was the most represented vendor among this week's Critical/KEV/high-EPSS disclosures (16 records). The most common weakness category was Deserialization of Untrusted Data, appearing in 37 records.

261 new ransomware victim postings were logged across 40 active groups, led by thegentlemen (50 postings). 1 newly disclosed breach were added to the tracker this week, together exposing approximately 345,439 records.

02 Threat Feed Overview

263 articles were captured across 8 sources this week, of which 97 were flagged Critical or High severity by keyword-based triage (37% of the week's total). The Hacker News was the most active source, contributing 68 articles.

Severity breakdown

SEVERITY	COUNT	% OF TOTAL
Critical	53	20%
High	44	17%
Medium	20	8%

06 Methodology & Sources

This report is generated automatically by THE SIGNAL's data pipeline from the sources below, with no independent analyst review of individual findings:

- **Threat Feed** — RSS from The Hacker News, Krebs on Security, BleepingComputer, Dark Reading, SecurityWeek, The Record, SANS ISC, Microsoft Security Blog, Unit 42, and NCSC UK. Severity is a keyword-based heuristic, not a scored assessment.
- **CVE Detail** — NVD CVE API 2.0, cross-referenced against CISA's Known Exploited Vulnerabilities (KEV) catalog. Only Critical/High severity records, plus any KEV-listed CVE regardless of score, are retained.
- **Research Detail** — The DFIR Report, Securelist, Elastic Security Labs, SentinelOne Labs, and Check Point Research.
- **Ransomware** — leak-site postings tracked via ransomware.live.
- **Breaches** — Have I Been Pwned.

Detail tables in this report are capped for length where a dataset's weekly volume is large; each section links to the corresponding live page on THE SIGNAL for the complete, current archive.

07 Report Versioning

This report format is under active development and is expected to change between editions — new sections, refined statistics, and better attribution as the underlying data pipeline improves. This edition was generated using **template v1.2**.

VERSION	DATE	NOTES
v1.2	2026-09-08	Every page of the PDF now has a real, colored top/bottom margin — including where a table or paragraph continues right after a page break, not just the first page — via a blank (no title, no page numbers) header/footer used solely to paint that space; report files renamed to a descriptive the-signal-weekly-report-<week> pattern instead of the bare ISO week code. Fixed a real stats bug: breakdown tables (sources, CWEs, vendors, categories, ransomware groups) now disclose "+N more" when capped at their top-8 display instead of silently truncating, after one shipped with a total that didn't reconcile. Ransomware victim postings are no longer linked (their source is a Tor .onion address, unsuitable for this report). The full report layout is now also published as its own HTML page, not just as a PDF-conversion input.
v1.1	2026-09-08	PDF is now a purpose-built print document (cover page, table of contents, numbered sections, real data tables with repeating headers, narrative analysis paragraphs) rendered from its own layout, not a screenshot of the web-view report — full-bleed dark theme to every page edge. Web-view dashboard panels no longer truncate long category/vendor names.
v1.0	2026-09-08	Initial report format: executive summary, dashboard view, and detail sections for CVEs, research articles, notable feed items, and ransomware/breach activity.
